WorkSheet2

Carl Frederick Delicana, BSIT 2-A

10-07-2022

```
#Using Vectors
#1. Create a vector using : operator
 #a. Sequence from -5 to 5. Write the R code and its output. Describe its output.
 seq(-5:5)
 #Output:
 #[1]  1  2  3  4  5  6  7  8  9 10 11

 #b. x <- 1:7. What will be the value of x?
 x <- 1:7
 print(x)
 #Output:
 #[1] 1 2 3 4 5 6 7

#2.* Create a vector using seq() function
 #a. seq(1, 3, by=0.2) # specify step size
 #Write the R code and its output. Describe the output.
 seq(1, 3, by=0.2)
 #Output:
 #[1] 1.0 1.2 1.4 1.6 1.8 2.0 2.2 2.4 2.6 2.8 3.0

#3. A factory has a census of its workers. There are 50 workers in total. The following list shows
their ages: 34, 28, 22, 36, 27, 18, 52, 39, 42, 29, 35, 31, 27, 22, 37, 34, 19, 20, 57, 49, 50,
37, 46, 25, 17, 37, 43, 53, 41, 51, 35, 24,33, 41, 53, 40, 18, 44, 38, 41, 48, 27, 39, 19, 30, 61,
54, 58, 26, 18.
 Workers <- c(34, 28, 22, 36, 27, 18, 52, 39, 42, 29, 35, 31, 27,
              22, 37, 34, 19, 20, 57, 49, 50, 37, 46, 25, 17, 37, 43, 53, 41, 51, 35,
              24,33, 41, 53, 40, 18, 44, 38, 41, 48, 27, 39, 19, 30, 61, 54, 58, 26,
              18)

 #a. Access 3rd element, what is the value?
 Workers[3]
 #Output:
 #[1] 22

 #b. Access 2nd and 4th element, what are the values?
 Workers[2]
 #Output:
 #[1] 28
 Workers[4]
 #Output:
 #[1] 36
```

```
#c. Access all but the 1st element is not included. Write the R code and its output.
Workers[2:49]
#Output:
#[1]  28 22 36 27 18 52 39 42 29 35 31 27 22 37 34 19 20 57 49 50 37 46 25 17 37 43 53 41 51 35
24 33 41 53 40
#[36] 18 44 38 41 48 27 39 19 30 61 54 58 26

#4. *Create a vector x <- c("first"=3, "second"=0, "third"=9). Then named the vector, names(x).
#a. Print the results. Then access x[c("first", "third")].
#Describe the output.
x <- c("first"=3, "second"=0, "third"=9)
names(x)
#b. Write the code and its output.
#Output:
#[1] "first"  "second" "third"

#5. Create a sequence x from -3:2.
#a. Modify 2nd element and change it to 0;
x<- -3:2
x[2] <- 0
x
#Describe the output.
#b. Write the code and its output.
#Output:
#[1] -3  0 -1  0  1  2

#6. *The following data shows the diesel fuel purchased by Mr. Cruz.
#a. Create a data frame for month, price per liter (php) and purchase-quantity (liter). Write the
codes.
Month <- c("Jan", "Feb", "March", "Apr", "May", "June")
Price_per_liter_php <- c(52.50, 57.25, 60.00, 65.00, 74.25, 54.00)
Purchase_quantity_liter <- c(25, 30, 40, 50, 10, 45)

frame <- data.frame(Month, Price_per_liter_php, Purchase_quantity_liter )
frame
#Output:
#Month Price_per_liter_php Purchase_quantity_liter
```

#	Month	Price_per_liter_php	Purchase_quantity_liter
#1	Jan	52.50	25
#2	Feb	57.25	30
#3	March	60.00	40
#4	Apr	65.00	50
#5	May	74.25	10
#6	June	54.00	45

```
#b. What is the average fuel expenditure of Mr. Cruz from Jan to June? Note: Use weighted.mean
(liter, purchase)
weighted.mean(Price_per_liter_php, Purchase_quantity_liter)
#Output:
#[1] 59.2625

#7. R has actually lots of built-in datasets. For example, the rivers data "gives the lengths (in
miles) of 141 "major" rivers in North America, as compiled by the US Geological Survey".
```

```
#a. Type "rivers" in your R console. Create a vector data with 7 elements, containing the number
of elements (length) in rivers, their sum (sum), mean (mean), median (median), variance (var)
standard deviation (sd), minimum (min) and maximum (max).
#data <- c(length(rivers), sum(rivers), mean(rivers), median(rivers), var(rivers), sd(rivers),
min(rivers), max(rivers))
data <- c(length(rivers), sum(rivers), mean(rivers), median(rivers), var(rivers),
         sd(rivers), min(rivers), max(rivers))

data

#b. What are the results?
#Output:
#[1]    141.0000   83357.0000    591.1844    425.0000 243908.4086    493.8708    135.0000   3710.0000

#c. Write the code and its outputs.
#Output:
#[1]    141.0000   83357.0000    591.1844    425.0000 243908.4086    493.8708    135.0000   3710.0000

#8. The table below gives the 25 most powerful celebrities and their annual pay as ranked by the
editions of Forbes magazine and as listed on the Forbes.com website.
#a. Create vectors according to the above table. Write the codes.
PowerRanking <- 1:25
CelebrityName <- c("Tom Cruise", "Rolling Stones", "Oprah Winfrey", "U2",
                "Tiger Woods", "Steven Spielberg", "Howard Stern", "50 Cent",
                "Cast of the sopranos",
                "Dan Brown", "Bruce Springsteen", "Donald Trump", "Muhammad Ali", "Paul McCartney",
                "George Lucas", "Elton John", "David Letterman", "Phil Mickelson", "J.K Rowling",
                "Bradd Pitt", "Peter Jackson", "Dr. Phil McGraw", "Jay Lenon", "Celine Dion",
                "Kobe Bryant")
Pay <- c(67, 90, 225, 110, 90, 332, 302, 41, 52, 88, 55, 44, 55, 40,
        233, 34, 40, 47, 75, 25, 39, 45, 32, 40, 31)

Data_Ranking <- data.frame(PowerRanking, CelebrityName, Pay)
Data_Ranking
#Output:
#PowerRanking        CelebrityName Pay
#1             1            Tom Cruise   67
#2             2        Rolling Stones   90
#3             3         Oprah Winfrey 225
#4             4                    U2 110
#5             5           Tiger Woods   90
#6             6      Steven Spielberg 332
#7             7          Howard Stern 302
#8             8                50 Cent   41
#9             9 Cast of the sopranos   52
#10           10             Dan Brown   88
#11           11     Bruce Springsteen   55
#12           12          Donald Trump   44
#13           13          Muhammad Ali   55
#14           14        Paul McCartney   40
#15           15          George Lucas 233
#16           16            Elton John   34
#17           17        David Letterman   40
```

```
#18             18        Phil Mickelson  47
#19             19           J.K Rowling  75
#20             20            Bradd Pitt  25
#21             21         Peter Jackson  39
#22             22       Dr. Phil McGraw  45
#23             23             Jay Lenon  32
#24             24           Celine Dion  40
#25             25           Kobe Bryant  31
```

#b. Modify the power ranking and pay of J.K. Rowling. Change power ranking to 15 and pay to 90.
Write the codes and its output.

```
PowerRanking [19] <- 15
PowerRanking
Pay [19] <- 90
Pay
